

Fuel Card Module & Import Scripts

The Fuel Card Module & Import Scripts are options available for improving fuel tracking throughout an organization. Basic fuel tracking comes standard in any Collective Data software product, but integrating data from fuel card providers greatly enhances accuracy, speed, and efficiency of getting that information into the fleet management system.

Benefits:

- **Help eliminate pilferage.**
- **Manage spending.**
- **Monitor fuel-related maintenance issues.**
- **Improve preventative maintenance schedules with accurate meter readings.**
- **Assure that accurate fuel data is in your system at all times for reporting and decision making.**

The Fuel Card Module provides easy management of fuel cards and their assignment to vehicles and employee PIN numbers. This can be very important for organizations dealing with more than one type of fuel card.

Using this module also establishes an easy connection to build fuel integrations from any number of fuel transaction sources in the future if you decide to switch to a new provider.

Collective Data is proud to offer the Collective Data Fleet Services Card back by *Wright Express*.

We can also integrate with most fuel card providers that make their data accessible. Here are a few companies that we have worked with:

- **Wright Express**
- **Comdata**
- **Go Gas**
- **Penn Pride**
- **Fuel Master**
- **Petro Vend**
- **Fleet One**

Fuel Data Import Options

Fuel Import Scripts can be developed on request for organizations that don't have a need to manage multiple fuel cards or assign them to an employee.

Automatic Imports

The automated fuel import is a method to assure that clients have up-to-date fuel information in their software at all times. The import script will automatically collect and process transaction data from the fuel provider's site at specified intervals, and insert the data into the Collective Data software database.

Manual Imports

The manual fuel import is a method that gives users the ability to incorporate their fuel transaction data into their fleet operations management system through Collective Data. Data files received from the fuel provider are entered manually using the import script.

Contact a Collective Data representative today to learn more about the Fuel Card Module & Import Script options.
