

Mobile Apps

Real-time remote access.

Collective Data Mobile Apps are a web-based extension of Collective Data's fleet management software systems. Users can login to their account from any configured computer or approved mobile device.

The Mobile Apps offer real-time data transfer from the field into the software database, which can be beneficial for organizations with remote workers at multiple locations.

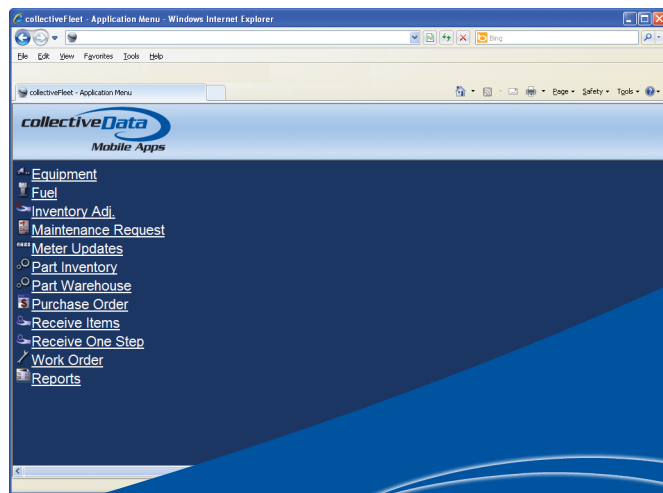

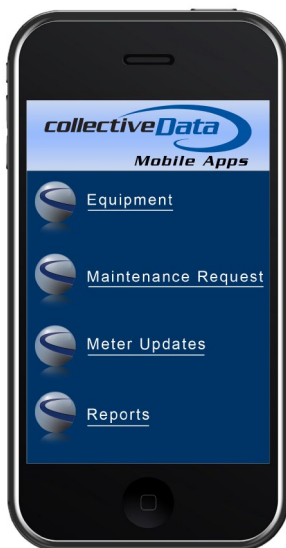

The application options can be configured for individual users as they are needed. The Mobile Apps grant users access to some of the *key* components of the parent software system: **Work Orders, Meter Log, Parts Inventory, Purchase Order, Inventory Adjust, Maintenance Request, Mobile Motor Pool, and Reports.**

Compatible On:

- iPhone™
- Any mobile device with Windows Mobile 6.1 or Opera Browsers
- Any web browser with internet access
