

Motor Pool Module

Optimize vehicle & equipment utilization.

The Key Components:

- Check In / Check Out
- Reserve / Cancel
- Pre-Checkout & Return Inspections
- Monitor All Vehicle Activity
- Rate Tracking
- Motor Pool Reports
- And More

The **Collective Data Motor Pool Module** gives an organization the tools they need to effectively manage a motor pool of vehicles or equipment. This module plugs directly into the software, eliminating the need to have multiple systems for managing the various aspects of a fleet operation.

With one system, a user at any time will be able to know what equipment is currently available, where it is located, who is using it, when it is due to be returned, and much more.

Managing the motor pool as a part of the overall fleet maintenance and management solution can be very beneficial. Besides the obvious time savings over a paper, pen, and phone method, integrating the motor pool module into the software helps gather accurate meter readings. These readings then drive the preventative maintenance schedules throughout the software that help a fleet run at its optimal level.

The **Collective Data Motor Pool Module** is the key to improving efficiency in a check in/check out scenario within any fleet.
