

Pre/Post Trip Inspections

A Collective Data & Zonar Systems integrated solution.

The **Zonar Inspection Integration** is a seamless way to combine the benefits of the Electronic Vehicle Inspection Report (EVIR) and Collective Data's fleet management software.

Tags are placed throughout a vehicle where inspections are required. Using the Zonar scanner system, drivers inspect the vehicle and place the reader within a few inches of the tag. They will then select a status for that area. Once the entire vehicle inspection is complete, the driver places the unit in the vehicle mount and the data is transferred into the Collective Data fleet management software system database.

Using the data provided, users of collectiveFleet or collectiveShop have access to all defects and inspection times for the vehicles. Creating maintenance requests from these defects are made easy, and well as updating the vehicles status once it has been repaired and is once again operational. Through a complete list of inspection records you can reduce liability and ensure your fleet is safe and following inspection regulations.

Benefits:

- **Ensure regulatory compliance and safety.**
- **Spot maintenance issues early.**
- **Reduce liability.**
- **Monitor driver inspection times for quality checks**
- **Automatic meter updates help improve the efficiency of maintenance performed in the fleet.**
