

Innovative technology
driving fleets forward.

collectiveFleet™ for Construction

Equipment Management Software

Helping construction companies manage the backbone of their operation more effectively.

- Improve all aspects of preventative maintenance resulting in reduced downtime and increased equipment life.
- Get better data related to all of your mobile assets: job sites, tools, and crew.
- Improve parts inventory management, cut costs by removing unused parts from the shelves, and increase warranty claims.
- Gain a flexible and powerful reporting system to deliver all the information needed for better decision making.

ABOUT THE TECHNOLOGY

Built on it's Core™ framework, Collective Data software is the most flexible and configurable asset management solution on the market. We understand that each organization has different tracking needs, and we are able to deliver a solution tailored to what you need.

Post-bid, **collectiveFleet for Construction** is the software to help you maximize productivity and make better management decisions.

Completing projects on time and within estimates is difficult to accomplish without an efficient deployment of equipment, crew, and other resources to the job site. By utilizing software technology like Collective Data's, you'll be more productive, improve equipment maintenance, reduce downtime, and have better data to make decisions that have a positive impact on operations.

Working closely with companies like yourself, Collective Data developed **collectiveFleet for Construction**, an equipment and asset management software solution focused on meeting the unique needs of construction equipment fleets.

The system makes managing the multiple elements of maintaining your mobile assets easier: work orders, service and inspection scheduling, parts inventory

management, warranties, registrations, and also improves the efficiency of your shop doing the work.

Equipment expenses are ever-increasing. Now is the time to adopt innovative software technology like **collectiveFleet for Construction** to control those expenses and help your company increase profits.

Get the most out of the hard-working assets driving your business.

SUPERIOR SUPPORT

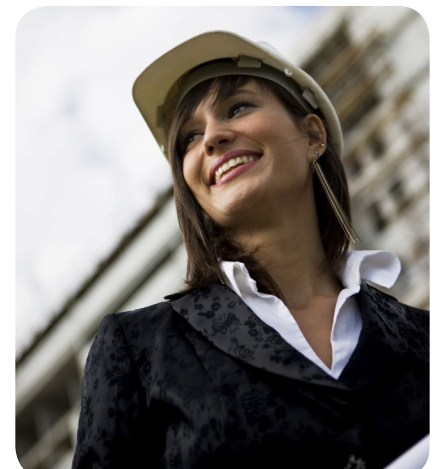

We have a 97% positive customer support rating from our annual customer satisfaction surveys, proving that Collective Data is committed to helping you achieve your goals.

- Manage data on your mobile equipment and crew without the whiteboard or spreadsheets.
- Save money through better preventative maintenance, better parts management, and by claiming more warranties before they expire.
- More efficient deployment of management of resources (equipment, labor, tools, parts, etc.) to each of your job sites with data showing you the costs.
- Put an efficient process in the shop to increase mechanic productivity, resulting in better maintained equipment that can stay on the job making you money.
- Various fuel management options give you the power to track, analyze, and truly understand how fuel consumption is affecting your equipment and the bottom-line.
- A powerful reporting system delivers data on your fleet, job sites, and labor with the ability to be exported to accounting systems for further processing.

CUSTOMER COMMENT

"We chose Collective Data because of the diversity of the software. We were able to compile information from three systems into one and eliminate duplicate work. We've sped up processes and now have a more real-time view of information."

- Julie Snyder,
Equipment Asset Coordinator,
Croell Redi-Mix
